LESSON # 245
choice of construction

7-Ply Ultralite Const.
- The original AWS construction
- Comes pressed in the LOK Concave
- Developed and tested by the AWS pro team
- Superior glue and lamination process ensures a stiff deck that keeps its pop.
- Thinner veneers than traditional 7-ply decks.

HGP Ultralite Const.
- Entire deck surface painted with High Gloss Paint over top and bottom.
- Coating ensures a stiffer, slicker deck.
- Pressed in the proven LOK concave.
- Developed and tested by the AWS pro team.

6-Ply Microlite Const.
- Over 2 years in testing and development.
- The lightest, stiffest, strongest decks available
- Comes pressed in the LOK Concave.
- 2 regular plys and 4 thinner plys provide superior light weight/strength combination.

7-Ply EXP Const.
- Pressed in proven LOK concave
- Ultralite thin plys for light, stiff construction.
- Phosphorescent coating makes board slicker and helps maintain pop.
- Developed and tested by the AWS pro team

A.B.S.

ANTI-LOCK BEARING SYSTEM

The A.B.S. is a breakthrough in skateboard bearings. It is a total system which begins with a special nine ball bearing that has a larger diameter inner hole in which the dual T-sleeves insert to meet the inner spacer. This holds the bearings in exact alignment and prevents the truck axle and wheel from shifting while allowing the bearings to spin freely. This eliminates wheel lock up and the frustrating banging of the axle ends to free your wheels. The A.B.S. makes for a highly durable bearing with the T-sleeves protecting the shield from damage during mounting and removal.

- HOLDS BEARINGS IN ALIGNMENT
- PROTECTS BEARING SHIELDS
- STOPS AXLES FROM SLIPPING
- ABEC 5 NINE BALL BEARING
- SELF LUBRICATING RETAINERS
